Evolution

Evolution From “simple fabric” to technical fabric

Texcar’s long activity, operational since 1972, guarantees great experience in all phases of the production of every type of fabric.

Over the years the company has distinguished itself by offering the supply of carpets, linen fabrics, furnishing fabrics and technical fabrics.

It is precisely in this last sector that careful research and experimentation was conducted, driven by customer requests, who identified Texcar as a company capable of innovating.

To respond to requests for very particular mechanical characteristics, containing costs and delivering on time, the organization of work and the technological evolution of the systems are of fundamental importance.

Texcar has finalized significant investments in new production lines, configured so as to be able to carry out special processes with precision.

Technology Modern facilities

The loom rooms have been completely updated in recent times, with modern systems capable of supporting the necessary production rates.

New production lines have been inserted in the raising and finishing departments, capable of carrying out those processes which, when suitably calibrated to measure, offer the fabrics ever-changing and exclusive characteristics.

From warping to finishing, numerous control activities have been included to monitor all production phases and guarantee a semi-finished product that meets the requests.

Innovation
Create solutions

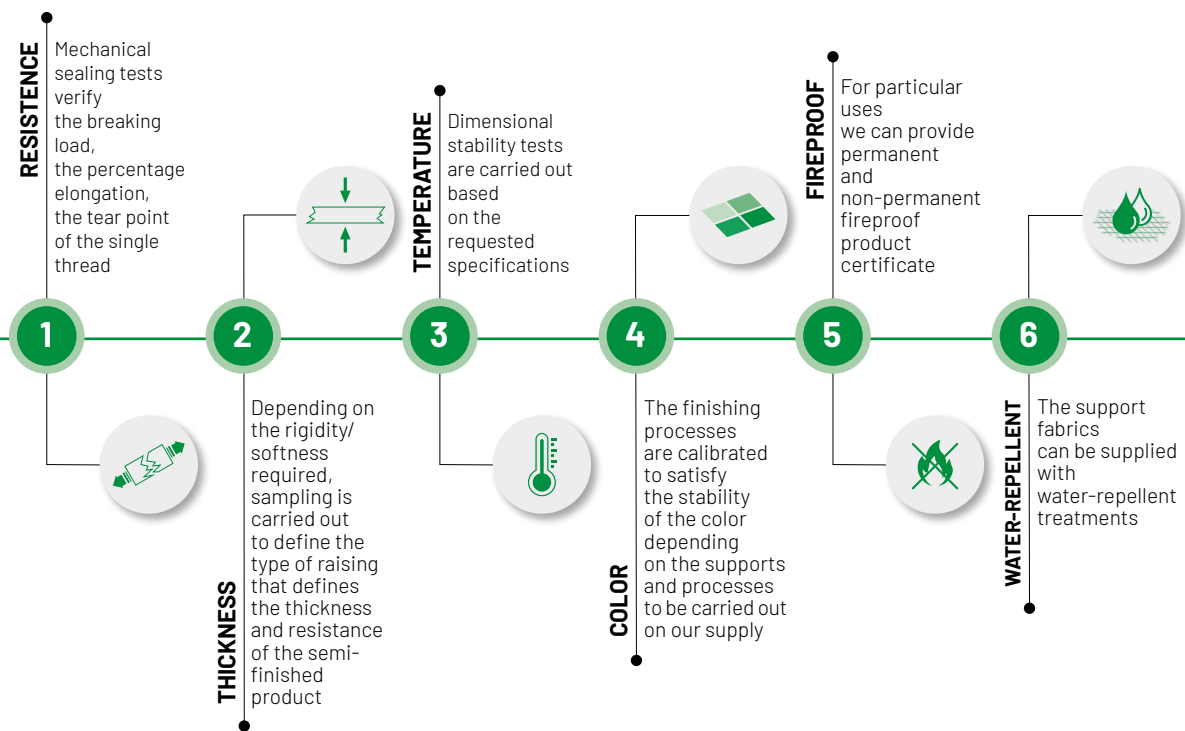

When customers realized that Texcar's expertise could make a difference to their production, the research and development department was increasingly busy finding solutions for fabrics that, until now, simply did not exist.

The innovative solutions that we offer every day satisfy very high technical/mechanical performances; responding to this challenge we have developed an exclusive ability in the creation of support fabrics, tailor-made for the most varied applications.

Innovation

**HIGH ADDED VALUE
for our fabrics**

Characteristics

For every need
we study tailor-made solutions

Characteristics
We put our soul into it

The creation of innovative technical support fabrics implies the ability to manage numerous technical characteristics that must find a balance based on the performance demands and type of use of the fabric.

Our commitment consists in dedicating ourselves completely to finding the solution for every specific need, designing that fabric which, when inserted into our customer's final product, will allow exclusive characteristics to be obtained.

Sustainability Environmental impact

The company adopts adequate social policies in its relations with employees and has configured the production structure with a view to respecting the environment.

The photovoltaic system allows the production of 600 kw/h for the energy needs of the systems and a significant investment has allowed the creation of an effective system for the abatement of fumes in the finishing phase.

The Global Recycled Standard environmental declaration guarantees the responsible and sustainable development of Texcar, which reduces the consumption of resources (raw materials, water and energy) by adapting manufacturing processes to established standards, with the use of recycled materials.

AREAS OF APPLICATION	AUTOMOTIVE
FURNITURE	PACKAGING BAGS
LEATHERWEAR	PAINTING CANVASES
CLOTHING	EXPO, EVENT & SHOW
TEXTILE HOME	TEXTILE INDUSTRY

Control Quality ensured

The application of technical fabrics in the most disparate contexts requires perfect compliance of the product with the required characteristics, which is why our Research and Development department is always busy developing new production processes.

To protect quality, numerous control phases have been included, both on the raw materials acquired and on internal processes. We foresee checks from the first meter of raw fabric produced, as well as in all the following phases: weaving, raising and finishing are subject to numerous in-line checks, up to the strict verification before delivery, with the compilation of the test report.

Quality

We were born in a valley in the Alps, within a reality that, over the decades, has developed one of the most advanced know-hows in the textile sector.

We grew up with the loom at home, like many of our families in the post-war period, those looms which were then grouped into factories, growing companies with the stimulus of mutual competition, spurred by competitiveness to attack increasingly international markets.
